

Zepto Retail Inventory Intelligence Dashboard - Project Report

This project presents an end-to-end Inventory Intelligence Solution developed in Power BI. The dashboard helps inventory managers monitor stock availability, identify inventory risks, analyze product performance, and support replenishment decisions through data-driven insights.

Business Problem

Retail inventory teams often struggle with stock-outs, low-stock visibility, inventory risk monitoring, and product-level replenishment decisions. This project was designed to provide centralized visibility into inventory health and business risks.

Project Objectives

Monitor inventory health, identify out-of-stock products, measure inventory risk exposure, perform category-level analysis, enable product-level drill-through analysis, and generate actionable business recommendations.

Tools & Technologies

Power BI, Power Query, DAX, Microsoft Excel.

Dashboard Structure

Page 1: Executive Inventory Overview. Page 2: Inventory Risk & Replenishment Dashboard. Page 3: Product Intelligence Center. Page 4: Executive Recommendations & Business Insights.

Key Metrics

Total Products: 1670 | Categories: 14 | Inventory Availability: 87.86% | Out of Stock Products: 453 | Low Stock Products: 546 | Inventory Value: ₹ 22.43 Lakhs | Inventory at Risk: ₹ 7.20 Lakhs.

Business Recommendations

Prioritize replenishment of out-of-stock products, establish automated reorder triggers, review category-level inventory allocation, optimize discount strategies, and monitor products classified as low stock.

Project Outcome

The dashboard provides inventory monitoring, risk identification, product intelligence, and executive decision support through a structured analytical framework.
